🚀 SKILLS

HTML, Css, JavaScript, Tailwind-css, Sass, React-js, Redux, Next-js, Node-js, Express, Mongodb, Web design

❤ INTERESTS

I love being part of a business where I can learn about lots of essential things of human nature and how they deal with stress and at the same time provide great good and services to the potential consumers, where I can learn about finance more better and pragmatic way to get more insight of money and over all how the whole thing works indeed.

🧩 ACTIVITIES

I love to read particularly autobiographies of great people who have done something great in their lives, I love to listen informative podcasts as well, I love to write a lot and try to share my thoughts and vision via writing. And I love traveling around different places as well.

🗣 LANGUAGES

English, Hindi, Bengali

🎯 OBJECTIVE

I am a self taught software engineer and have been coding as well learning new things of programming for 2 years. I firmly believe that a skilled and well organized programmer can alter the people's lives and over all the world ever so good and comprehensive manner. And as a programmer i believe that i have a obligation to make the world a better place by creating plenty of good and useful things by doing programming. And also i love coding as much as I love my life and other things of mine. If i get designated by you or by your company as a newbie software engineer certainly I'll strive to engage with your people and work together as a great team to bring some worthwhile changes not necessarily for your company but your potential clients as well.

🎓 EDUCATION

bachelor of commerce (honours)

47%

💡 PROJECTS

E-commerce website

I have made plenty of fully functional e-commerce websites by using tools like JavaScript React-js and Next-js and for backend node-js, express and mongodb for storing the user's data.

Video streaming website

I have made a video streaming website where you can watch real movies and shows according to your convince like Netflix. In order to make that comprehensive project I used JavaScript, React-js, Node-js, express and tailwind-css for designing the pages of the website

Real time chat application

I have made real time chat application as well like other functional chat applications out there. Where you can chat with each other live and after that your all data will be stored in the backed and I have made fully optimized login and logout along with registration functionality on that real time chat application in order keep the users data secure and safe.

Games

I have made couple of small but compelling games such as tic-tac-toe, snake game and lot more where I used JavaScript and React and for designing the page I used Sass.
